ABSTRACT

The subjects covered in this bibliogaphy (1,406 citations) include the history of sports and sports medicine, sports injuries, physical fitness throughout various stages of life, and the current status of physical fitness in the United States. The first section includes journal articles, book chapters, and conference papers in three areas: history and current perspectives of sports, sport medicine and physical fitness; sports injuries (subdivided by major sports), and physical fitness (subdivided by three major age groups). Sections two and three cover monographs, dissertations, conference proceedings, and audiovisuals in all the subject areas. The final section contains an alphabetical listing of serials on the subjects of physical fitness and sports medicine. (JD)

SERIES NOTE

This is one of a series of *Specialized Bibliographies* prepared and distributed by the Public Services Division of the National Library of Medicine (NLM). These bibliographies are usually the result of a combination of manual and computerized searching, utilizing databases produced by NLM and others. *Specialized Bibliographies* are generally more selective in content than those bibliographies produced under NLM's *Current Bibliographies in Medicine* series. The only criterion for inclusion of a published work in a *Specialized Bibliography* is its relevance to the topic being presented; the format, ownership, or location of the materials are not considered.

Publications in this series are not copyrighted and may be freely reproduced. A single copy may be obtained by sending a self-addressed, gummed labed to the address given below.

PHYSICAL FITNESS & SPORTS MEDICINE

This bibliography was prepared in conjunction with *The Symposium on Physical Fitness and Sports Medicine* held at the National Library of Medicine on June 9, 1988. The Symposium was jointly sponsored by the Library, the National Institute of Arthritis and Musculoskeletal and Skin Diseases, and the National Fitness Foundation.

The subjects covered in this publication reflect the themes of the Symposium, which included the history of sports and sports medicine, sports injuries, physical fitness throughout the various stages of life, and the current status of physical fitness in the United States. In gathering material, the MEDLINE, AVLINE, CATLINE, HISTLINE, and SERLINE databases of the National Library of Medicine (NLM) were searched as well as the SPORT DATABASE of the Sport Information Resource Centre, Ottawa, Canada. Because of the large volume of literature available on these subjects, with the exception of the historical material only items published in English since 1986 were selected. This bibliography is therefore extensive but not exhaustive; the exclusion of particular items is no reflection against their quality or usefulness. The purpose was to indicate to the audience the type and range of materials available and to provide a starting point for further investigation.

Physical Fitness & Sports Medicine has been divided into four sections. The first section includes journal articles, book chapters, and conference papers in three areas: history and current perspectives of sports, sports medicine, and physical fitness; sports injuries, subdivided by major sports; and physical fitness, subdivided by three major age groups. Citations may appear under more than one heading. Sections II and III cover monographs, dissertations, conference proceedings, and audiovisuals in all the subject areas and have been arranged alphabetically by main entry. The final section contains an alphabetical listing of serials on the subjects of physical fitness and sports medicine currently being published as taken from NLM's SERLINE database.
